Unit: undefined **Name:** ______________

Topic: Variables and Expressions / Order of Operations **Date:** __________

Foundation (Level -1)

Q1. What is the variable in the expression $2x$?

(A) 2
(B) x
(C) $2x$
(D) None
(E) Expression

Q2. Identify the constant in the expression $4 + 3x$

(A) 3
(B) 4
(C) $3x$
(D) None
(E) Expression

Q3. What is the coefficient of x in the expression $5x$?

(A) 1
(B) 5
(C) x
(D) None
(E) Expression

Q4. Which of the following is an example of a variable: x, 2, or $3y$?

(A) 2
(B) x
(C) $3y$
(D) x or $3y$
(E) None

Q5. Identify the operator in the expression $7 - 2$

(A) 7
(B) 2
(C) -
(D) None
(E) Expression

Q6. What does the term $2x$ represent in the expression $2x + 5$?

(A) Constant
(B) Variable
(C) Coefficient
(D) Expression
(E) None

Q7. Is $3y$ a variable or an expression?

(A) Variable
(B) Expression
(C) Constant
(D) Coefficient
(E) None

Q8. What is the term for a number that is multiplied by a variable, such as 4 in $4x$?

(A) Constant
(B) Coefficient
(C) Variable
(D) Expression
(E) None

Open Ended Questions (FRQ)

Q9. Draw a diagram to illustrate the difference between a constant and a variable in an algebraic expression. Provide a brief explanation.

Q10. Explain, using examples, how the order of operations is used to simplify expressions. Be sure to include at least two expressions and the step-by-step simplification process for each.

Chef's Tips

- Emphasize the distinction between variables, constants, and expressions to help students understand the fundamental concepts of algebra.
- Use visual aids, such as diagrams and graphs, to illustrate the relationships between variables, constants, and expressions.
- Provide students with numerous examples and opportunities for practice to reinforce their understanding of the order of operations and how to simplify expressions.
