Unit: undefined **Name:** ________________
Topic: Variables and Expressions / Order of Operations **Date:** __________

Classwork

Q1. What is the variable in the expression $2x + 3$?
(A) 2
(B) 3
(C) x
(D) 2x
(E) 3x

Q2. Identify the coefficient in the term $4y$
(A) y
(B) 4
(C) 4y
(D) 1
(E) 0

Q3. What operation is represented by the symbol + in $2 + 5$?
(A) Subtraction
(B) Addition
(C) Multiplication
(D) Division
(E) Exponentiation

Q4. In the expression $3cdot2$, what is the operation being performed?
(A) Addition
(B) Subtraction
(C) Multiplication
(D) Division
(E) Exponentiation

Q5. What is the constant term in $2x - 4$?
(A) 2x
(B) 2
(C) -4
(D) x
(E) 0

Q6. Identify the operator in the expression $7 - 2$
(A) $+$
(B) -
(C) $cdot$
(D) /
(E)

Q7. What is the term $5x$ an example of?
(A) Constant
(B) Variable
(C) Coefficient
(D) Monomial
(E) Polynomial

Q8. In the expression $9+1$, what operation is being performed?
(A) Subtraction
(B) Addition
(C) Multiplication
(D) Division
(E) Exponentiation

Open Ended Questions (FRQ)

Q9. Explain, using examples, the difference between a variable and a constant in an algebraic expression. Provide a simple expression that includes both.

Q10. Draw a simple diagram to illustrate the concept of the order of operations. Use the expression $3 + 2cdot4$ as an example and explain how it should be evaluated step by step.

Chef's Tips

- Ensure students understand the basic definitions of variables, constants, and coefficients before proceeding to more complex topics.
- Use visual aids and simple examples to explain the order of operations to help students grasp the concept effectively.
- Provide ample practice opportunities for students to identify and apply the order of operations in various expressions.
