Unit: undefined **Name:** ____________
Topic: Variables and Expressions / Order of Operations **Date:** __________

Foundation (Level -1)

Q1. What is the variable in the expression $2x$?
(A) 2
(B) x
(C) 2x
(D) $+$
(E) $-$

Q2. Identify the coefficient in the expression $4y$.
(A) y
(B) 4
(C) 4y
(D) $+$
(E) $-$

Q3. What is the operator in the expression $3 + 2$?
(A) 3
(B) 2
(C) $+$
(D) $-$
(E) *imes*

Q4. Identify the constant term in the expression $2x + 5$.
(A) 2x
(B) 5
(C) $+$
(D) $-$
(E) *imes*

Q5. What is the expression x an example of?
(A) A constant
(B) A variable
(C) A coefficient
(D) An operator
(E) A constant term

Q6. Identify the type of expression $3x$ is.
(A) A numerical expression
(B) An algebraic expression
(C) A constant expression
(D) A variable expression
(E) A geometric expression

Q7. What does the term $2x$ represent in an expression?
(A) The sum of 2 and x
(B) The product of 2 and x
(C) The difference of 2 and x
(D) The quotient of 2 and x
(E) The constant term

Q8. Which of the following is an example of a simple expression?
(A) $2x + 3$
(B) $4y - 2$
(C) x
(D) 5
(E) All of the above

Open Ended Questions (FRQ)

Q9. Draw a simple diagram to illustrate the concept of a variable in an expression. Explain your diagram in 1-2 sentences.

Q10. Provide an example of a real-life situation where you would use a simple expression, such as $2x$ or $3y$. Explain your example in 1-2 sentences.

Chef's Tips

- Emphasize the definition of variables as letters or symbols that represent unknown or changing values.
- Focus on simple expressions, such as $2x$ or $3y$, to introduce the concept of coefficients and variables.
- Use visual aids and real-life examples to help students understand the concept of expressions and variables.
