Unit: undefined
Topic: Variables and Expressions / Order of Operations

Name: ________________
Date: ___________

Challenge (Level 0)

Q1. What is the variable in the expression $2x$?
(A) 2
(B) x
(C) $+$
(D) $-$
(E) $*$

Q2. Identify the coefficient in the term $4y$.
(A) y
(B) 4
(C) $+$
(D) $-$
(E) $*$

Q3. What is the constant term in the expression $3x + 2$?
(A) $3x$
(B) 2
(C) $+$
(D) $-$
(E) $*$

Q4. Which operation is performed first in the expression $2 + 3imes4$?
(A) Addition
(B) Subtraction
(C) Multiplication
(D) Division
(E) Exponentiation

Q5. Identify the operator in the expression $5 - 2$.
(A) $+$
(B) $-$
(C) $*$
(D) $/$
(E)

Q6. What is the term in the expression $2x + 5$ that contains the variable?
(A) $2x$
(B) 5
(C) $+$
(D) $-$
(E) $*$

Q7. Which of the following expressions contains a constant term only?
(A) $3x$
(B) 2
(C) $x + 2$
(D) $3x + 2$
(E) $x - 2$

Q8. Identify the operation that is not present in the expression $2imes3 + 4$.
(A) Addition
(B) Subtraction
(C) Multiplication
(D) Division
(E) Exponentiation

Open Ended Questions (FRQ)

Q9. Draw and label the different parts of the expression $2x + 5$. Explain the role of each part.

Q10. Explain the concept of order of operations. Provide an example of how it is used to simplify an expression.

Chef's Tips

- Emphasize the importance of identifying and understanding the different parts of an expression, such as coefficients, variables, and constant terms.
- Use visual aids and examples to illustrate the concept of order of operations and how it is used to simplify expressions.
- Provide opportunities for students to practice applying the order of operations to simplify expressions and solve problems.
