Unit: undefined
Topic: Variables and Expressions / Order of Operations

Name: ____________
Date: ________

Challenge (Level 0)

Q1. What is the variable in the expression $2x + 3$?
(A) 2
(B) 3
(C) x
(D) 2x
(E) 2x + 3

Q2. Identify the coefficient in the term $4y$?
(A) y
(B) 4
(C) 4y
(D) 1
(E) None

Q3. What is the constant term in the expression $x - 2$?
(A) x
(B) -2
(C) 2
(D) 1
(E) 0

Q4. Identify the operator in $7imes2$?
(A) 7
(B) 2
(C) $imes$
(D) 14
(E) None

Q5. What is the expression $3 + 2$ an example of?
(A) A variable
(B) A constant
(C) An operation
(D) A simple expression
(E) An equation

Q6. Identify the operation being performed in $9 - 1$?
(A) Addition
(B) Subtraction
(C) Multiplication
(D) Division
(E) Exponentiation

Q7. What does the term $2x^2$ represent?
(A) A constant
(B) A variable
(C) An algebraic expression
(D) A geometric term
(E) An exponential term

Q8. In the expression $5(2x)$, what operation is being performed between 5 and $2x$?
(A) Addition
(B) Subtraction
(C) Multiplication
(D) Division
(E) Exponentiation

Open Ended Questions (FRQ)

Q9. Draw a simple diagram to illustrate the concept of a variable and explain its role in an algebraic expression.

Q10. Explain the difference between a constant and a variable in the context of algebraic expressions. Provide at least two examples.

Chef's Tips

- Emphasize the distinction between variables and constants in algebraic expressions.
- Ensure students understand the role of coefficients in terms with variables.
- Use simple examples to illustrate the order of operations and how it applies to basic expressions.
