

Foundation (Jalapeno)

Open Ended Questions (FRQ)

Q9. Solve the equation $2x + 5 = 11$. Check your solution for accuracy.

Q10. A person invests 500 in the stock market and earns 25 in interest. If they then withdraw 100, what is their new balance? Solve the equation $x - 100 = 425$ to find the final balance after withdrawal.

Chef's Tips

- Remind students to check their solutions for accuracy
- Encourage students to read each question carefully
- Allow students to use calculators for calculations only
