

Quiz (Carolina Reaper)

Open Ended Questions (FRQ)

Q9. A logistics company's profit P is given by the equation $P = 2^{x-1}$, where x is the number of shipments. Find the value of x when $P = 8$ and show your work.

Q10. The number of packages N delivered by a courier service is modeled by the equation $N = 3 \cdot 2^{0.5t}$, where t is the number of hours. Find the value of t when $N = 12$ and show your work.

Chef's Tips

- Use a calculator to check your work
- Show all work and explanations
- Check for units and reasonableness of answers
