Open Ended Questions (FRQ)

- Q9.** A soccer team has played 10 games and won $\frac{3}{5}$ of them. How many more games must they win to have a $\frac{2}{3}$ win rate for the season, assuming they play a total of 15 games?
- Q10.** A baseball player has a batting average of $\frac{2}{5}$. If he has 20 at-bats, how many hits does he have? If he wants to raise his average to $\frac{1}{2}$, how many more hits must he get in the next 10 at-bats?

Chef's Tips

- Emphasize the importance of labeling and checking units in mixture problems.
- Use visual aids like diagrams or charts to help students understand complex mixtures.
- Encourage students to check their work by plugging their answers back into the original equation.
