

Challenge (Habanero)

Open Ended Questions (FRQ)

- Q9.** A game's high score list is modeled by the equation $y = 2x - 5$, where y is the score and x is the level. Find the equation of a line that is parallel to this and passes through the point $(4, 3)$. Show your work and write the equation in slope-intercept form.
- Q10.** A company's data usage can be modeled by the equation $y = 0.5x + 10$, where y is the GB used and x is the number of employees. Find the equation of a line that represents a parallel trend and passes through the point $(10, 15)$. Explain your reasoning and write the equation in slope-intercept form.

Chef's Tips

- Ensure students understand the concept of parallel lines and slope.
- Remind students to show their work for free response questions.
- Encourage students to use real-world examples to understand the applications of parallel lines.
