

Unit: 6 Unit 5: Linear Equations

Name: _____

Topic: Point-Slope Form, Slope-Intercept Form, Standard Form and Converting Forms

Date: _____

Homework (Jalapeno)

Open Ended Questions (FRQ)

Q9. An archaeologist discovered that the length l of an ancient sword and its width w are related by the equation $l = 2w + 1$. Graph this equation on a coordinate plane and find the x - and y -intercepts. Provide your answer with the intercepts and the graph description.

Q10. The weight w of ancient statues and their height h are related by the equation $w = \frac{3}{4}h - 2$. Convert this equation to point-slope form and then graph it. Describe the graph, including the x - and y -intercepts, and provide the point-slope equation.

Chef's Tips

- Tip 1: Ensure accurate conversion between forms.
- Tip 2: Double-check calculations for slope and intercepts.
- Tip 3: Use historical context to frame word problems creatively.
