

Challenge (Habanero)

Open Ended Questions (FRQ)

- Q9.** A gaming company wants to analyze the relationship between the number of players x and the total revenue y generated. The equation $y = 2x + 1000$ represents this relationship. Calculate the rate of change of the revenue with respect to the number of players and interpret the result in the context of the gaming industry.
- Q10.** A graph shows the relationship between the number of hours x spent coding and the number of bugs y found. The slope of the graph is -2 . Interpret the meaning of this slope in the context of software development and provide an example of how this information could be used to improve the coding process.

Chef's Tips

1

- Tip 1: Encourage students to use real-world examples to illustrate their understanding of slope and rate of change.
- Tip 2: Emphasize the importance of interpreting the slope in the context of the problem.
- Tip 3: Remind students to check their units when calculating and interpreting the rate of change.
