

Challenge (Habanero)**Open Ended Questions (FRQ)**

Q9. A data analyst has 720 GB of storage space. Each data file requires 15 GB and each video file requires 60 GB. If the analyst wants to store at least 6 data files and at most 9 video files, write an inequality that represents this situation and solve for the feasible region.

Q10. A gamer wants to level up in a game. To do so, they need to score at least 600 points in a level and have an accuracy of at least 85

Chef's Tips

- Read each question carefully and choose the correct answer.
- Use the given information to determine the correct inequality.
- Graph the feasible region to visualize the solution.
