

Challenge (Habanero)**Open Ended Questions (FRQ)**

Q9. The altitude of a plane is given by the equations $y = x + 5$ and $y = 2x - 10$. Graph the system and find the point of intersection. Show all work.

Q10. A car rental company has two options: $y = 0.25x + 20$ and $y = 0.5x - 10$, where y is the cost and x is the number of days. Graph the system, find the point of intersection, and interpret the results. Show all work.

Chef's Tips

1

- Tip 1: Ensure students understand the concept of graphing linear systems.
- Tip 2: Emphasize the importance of identifying the point of intersection.
- Tip 3: Encourage students to interpret the graphical solutions in context.
