

Unit: 6 Unit 8: Quadratics

Topic: Converting Forms (Completing the Square)

Name: _____

Date: _____

Challenge (Habanero)

Open Ended Questions (FRQ)

Q9. Convert the quadratic equation $x^2 - 6x + 8$ to vertex form by completing the square. Show all steps.

Q10. Using the equation $s = -3(x - 2)^2 + 15$, where s is the score, find the value of x when $s = 12$. Show all steps and calculations.

Chef's Tips

- Tip 1: Ensure students understand the difference between standard and vertex form.
- Tip 2: Emphasize the importance of completing the square carefully.
- Tip 3: Remind students to check their work and ensure all equations are balanced.
