

Foundation (Jalapeno)

- Q1.** What is the purpose of a two-way frequency table in business?
- (A) To calculate stock prices
(B) To analyze associations between variables
(C) To predict tax rates
(D) To determine savings interest
(E) To track employee hours
- Q2.** A company has 24 employees who invest in the stock market. The two-way table shows the number of employees who invest in stocks A and B. If 8 employees invest in both stocks, what is the total number of employees who invest in stock A or stock B?
- (A) 12
(B) 16
(C) 20
(D) 24
(E) 28
- Q3.** A two-way table shows the relationship between the type of investment and the return on investment. Which of the following statements is supported by the table?
- (A) High-risk investments always have high returns
(B) Low-risk investments always have low returns
(C) There is a strong association between investment type and return
(D) There is no association between investment type and return
(E) Investment type does not affect return
- Q4.** A survey of 30 investors shows the following two-way table. What is the relative frequency of investors who prefer stocks and have a high return?
- (A) $\frac{1}{6}$
(B) $\frac{1}{5}$
(C) $\frac{1}{4}$
(D) $\frac{1}{3}$
- (E) $\frac{1}{2}$
- Q5.** Which of the following is an example of a two-way table in finance?
- (A) Stock prices over time
(B) Number of employees by department
(C) Relationship between investment type and return
(D) Company profits by quarter
(E) Customer satisfaction ratings
- Q6.** A company has the following two-way table showing the relationship between investment type and return. What is the number of employees who invest in stocks with a high return?
- (A) 8
(B) 10
(C) 12
(D) 14
(E) 16
- Q7.** Which of the following statements is true about two-way tables?
- (A) They can only be used for categorical data
(B) They can only be used for numerical data
(C) They can be used to analyze associations between variables
(D) They can only be used for small datasets
(E) They are only used in finance
- Q8.** A survey of investors shows the following two-way table. What is the total number of investors who prefer bonds or have a low return?
- (A) 18
(B) 20
(C) 22
(D) 24
(E) 26

Open Ended Questions (FRQ)

- Q9.** Create a two-way table to show the relationship between investment type (stocks or bonds) and return on investment (high or low) for a sample of 20 investors. Calculate the relative frequency of investors who prefer stocks with a high return.
- Q10.** Analyze the following two-way table and answer the questions: (1) What is the association between investment type and return? (2) What is the relative frequency of investors who prefer bonds with a low return? (3) What conclusions can be drawn about investment type and return?

Chef's Tips

- 1
- Tip 1: Ensure students understand the concept of two-way tables before administering the test
 - Tip 2: Provide examples of two-way tables in different contexts to help students understand the concept
 - Tip 3: Encourage students to use real-world examples to illustrate their answers
