

Homework 2

Q1. What is the variable in the expression $2x + 3$?

- (A) 2
- (B) 3
- (C) x
- (D) $2x$
- (E) None of the above

Q2. Identify the operator in the expression 4×5 ?

- (A) +
- (B) -
- (C) *imes*
- (D) *div*
- (E) =

Q3. What is the coefficient of x in $4x$?

- (A) 1
- (B) 2
- (C) 3
- (D) 4
- (E) None of the above

Q4. What does the term 'expression' mean in math?

- (A) A statement that is always true
- (B) A statement that is always false
- (C) A group of numbers, variables, and operators
- (D) A single number or value
- (E) A mathematical equation

Q5. What is the constant term in $2x + 5$?

- (A) 2
- (B) 5
- (C) x
- (D) $2x$
- (E) None of the above

Q6. Identify the operand in $3 + 2$.

- (A) +
- (B) 3
- (C) 2
- (D) Both 3 and 2
- (E) None of the above

Q7. What does the term 'variable' mean in math?

- (A) A symbol that represents a fixed value
- (B) A symbol that represents a value that can change
- (C) A mathematical operation
- (D) A numerical value
- (E) A constant term

Q8. What is $2 \cdot 3$ an example of?

- (A) Addition
- (B) Subtraction
- (C) Multiplication
- (D) Division
- (E) Exponentiation

Open Ended Questions (FRQ)

Q9. Draw a picture that represents the expression $x + 2$. Be sure to include labels and explain the meaning of each part.

Q10. Explain the difference between a constant and a variable in your own words, using examples to support your explanation.

Chef's Tips

- Focus on basic conceptual definitions and single-step identification to ensure students understand the fundamentals of variables and expressions.
- Emphasize the importance of understanding the order of operations to simplify expressions correctly.
- Use visual aids and real-world examples to help students connect abstract concepts to tangible scenarios, enhancing their comprehension of algebraic foundations.
