Open Ended Questions (FRQ)

Q9. Tom has 12 boxes of crayons to package in cartons. Each carton can hold 4 boxes of crayons. What is the ratio of cartons to boxes of crayons? Use this ratio to determine how many cartons Tom will need to buy if he gets 48 more boxes of crayons.

Q10. A group of friends want to split some candy. If the ratio of gummy bears to sour candies is 2 : 3, and they have 30 gummy bears, how many sour candies should they have? If they get 12 more sour candies, what will be the new ratio of gummy bears to sour candies? Show your work.

Chef's Tips

- Make sure to check the work for questions 9 and 10
- Pay close attention to units and scaling on ratios
- Remind students to simplify their ratios when possible
