Open Ended Questions (FRQ)

Q9. Tom has been saving money for a bike and has

120

in his savings account. His friend Alex has been saving for a bike as well and has

180

. If they both save at the same rate, what will be the ratio of their savings after 6 months if Tom saves

20

per month and Alex saves

25

per month?

Q10. A water tank can hold 1200 gallons of water. Due to a leak, the tank is losing water at a rate of 2 gallons per minute. At the same time, water is being added to the tank at a rate of 5 gallons per minute. Determine the ratio of the amount of water lost to the amount of water added after 30 minutes and explain your reasoning.

Chef's Tips

- Please ensure students have a calculator and a pencil
- Remind students to show all work and explanations for free-response questions
- Emphasize the importance of checking units in ratio and proportion problems
