

Advanced (Habanero)

Open Ended Questions (FRQ)

Q9. Given $f(x) = x^2 - 4$ and $g(x) = x + 2$, find $(f \cdot g)(x)$. Simplify your answer.

Q10. If $f(x) =$

$\frac{1}{x-1}$ and $g(x) =$

$\frac{1}{x+1}$, find $(f/g)(x)$. Determine the domain of the resulting function.

Chef's Tips

- Remind students to show all work and simplify answers
- Emphasize the importance of checking the domain of the resulting functions
- Encourage students to use algebraic properties when simplifying expressions
