Open Ended Questions (FRQ)

- Q9.** Find the equation of a line parallel to $y = 2x - 1$ and passing through the point $(2, 5)$. Show your work.
- Q10.** Prove that the lines $y = x + 2$ and $y = x - 3$ are parallel. Use the slope formula $m = \frac{y_2 - y_1}{x_2 - x_1}$.

Chef's Tips

- Allow students to use a calculator for slope calculations
- Have students show their work and explain their reasoning for FRQs
- Emphasize the importance of using the slope formula to determine parallel lines
