

Advanced (Habanero)

Open Ended Questions (FRQ)

Q9. Prove that two lines $y = 2x + 3$ and $y = 2x - 4$ are parallel by showing their slopes are equal. Required work and equations must be shown.

Q10. Write the equation of a line parallel to $y = -2x + 1$ that passes through $(1, 3)$. Show all steps and required work.

Chef's Tips

- Encourage students to read each question carefully
- Emphasize the importance of showing work for free-response questions
- Remind students to use the given equations to find the slopes of parallel lines
