

Foundation (Jalapeno)

- Q1.** What is the slope of the line $y = 2x + 3$?
(A) 1
(B) 2
(C) 3
(D) 4
(E) 5
- Q2.** A line has a slope of -2 and passes through $(2, 3)$. What is its equation?
(A) $y = -2x + 7$
(B) $y = -2x - 1$
(C) $y = 2x + 1$
(D) $y = 2x - 1$
(E) $y = -x + 2$
- Q3.** What does a slope of 0 represent?
(A) A vertical line
(B) A horizontal line
(C) A positive rate of change
(D) A negative rate of change
(E) No rate of change
- Q4.** A slope of 5 means that for every 1 unit increase in x , y increases by
(A) 1 unit
(B) 2 units
(C) 3 units
(D) 4 units
(E) 5 units
- Q5.** What is the slope of a line that passes through $(1, 2)$ and $(3, 4)$?
- (A) $\frac{1}{2}$
(B) $\frac{2}{3}$
(C) $\frac{2}{2}$
(D) $\frac{3}{2}$
(E) $\frac{4}{1}$
- Q6.** A line has an undefined slope. What can be said about this line?
(A) It is a horizontal line
(B) It is a vertical line
(C) It is a curved line
(D) It has a slope of 0
(E) It has a slope of 1
- Q7.** What is the rate of change of the function $y = 3x - 2$?
(A) 1
(B) 2
(C) 3
(D) 4
(E) 5
- Q8.** A table shows the values of x and y . The slope can be found by
(A) finding the ratio of y to x
(B) finding the ratio of the changes in y to the changes in x
(C) adding x and y
(D) subtracting y from x
(E) multiplying x and y
- Q9.** Graph the equation $y = -2x + 1$. Find its slope and y -intercept.

Open Ended Questions (FRQ)

- Q10.** Find the equation of a line with a slope of 3 that passes through $(1, 4)$. Write the equation in slope-intercept form.

Chef's Tips

- Encourage students to graph equations to visualize the slope
- Emphasize the importance of identifying the slope from the equation
- Remind students to use the slope formula when given two points on the line
