

## Advanced (Habanero)

### Open Ended Questions (FRQ)

**Q9.** Create a scatter plot for the data: (1, 2), (2, 4), (3, 6), (4, 8). Then, draw the line of best fit and write its equation.

**Q10.** A bakery sells a total of 250 loaves of bread per day. The price of a loaf of bread is

2

. If the bakery increases the price by

0.50

per day, the number of loaves sold decreases by 10. Use this data to create a line of best fit and predict the number of loaves sold if the price is

3

per loaf.

### Chef's Tips

1

- Tip 1: Encourage students to use graph paper for scatter plots
- Tip 2: Remind students to check for outliers when creating the line of best fit
- Tip 3: Emphasize the importance of labeling axes and title
