

Advanced (Habanero)**Open Ended Questions (FRQ)**

Q9. Solve the system of equations: $x + 2y = 7$ and $3x - 2y = 5$. Show your work and explain your answer in the context of a real-world problem.

Q10. A company has 500 to spend on advertising. They plan to spend x dollars on TV ads and y dollars on radio ads. If each TV ad costs 50 and each radio ad costs 20, and they want to spend at least 200 on TV ads, write a system of linear equations to represent this situation and solve for x and y . Explain your answer in the context of the problem.

Chef's Tips

- Make sure to read each question carefully
- Use the given equations to solve for the unknown variables
- Check your work and explain your answers in the context of the problem
