

Foundation (Jalapeno)

- Q1.** What is the purpose of graphing a system of linear equations?
(A) To find the slope of one line
(B) To identify the intersection point as a solution
(C) To determine the equation of one line
(D) To find the y-intercept of one line
(E) To identify the x-intercept of one line
- Q2.** Which of the following systems has no solution? $x + y = 2$ and $x + y = 3$
(A) The system has infinitely many solutions
(B) The system has one solution
(C) The system has no solution
(D) The system is dependent
(E) The system is inconsistent
- Q3.** What is the intersection point of the lines $y = 2x - 1$ and $y = -x + 3$?
(A) (1, 1)
(B) (1, 2)
(C) (2, 3)
(D) (-1, 2)
(E) (2, 1)
- Q4.** A system of linear equations has one solution. What can be said about the lines?
(A) The lines are parallel
(B) The lines are perpendicular
(C) The lines intersect at one point
(D) The lines are coincident
(E) The lines have the same slope
- Q5.** Which of the following is a system of linear equations? $x + y = 2$ and $x - y = 3$
(A) A system of linear inequalities
(B) A system of nonlinear equations
(C) A system of linear equations
(D) A system of quadratic equations
(E) A system of polynomial equations
- Q6.** A system of linear equations has infinitely many solutions. What can be said about the lines?
(A) The lines are parallel
(B) The lines are perpendicular
(C) The lines intersect at one point
(D) The lines are coincident
(E) The lines have the same slope
- Q7.** What is the solution to the system $x + y = 2$ and $x - y = 0$?
(A) (1, 1)
(B) (2, 0)
(C) (0, 2)
(D) (1, 0)
(E) (0, 0)
- Q8.** A system of linear equations has no solution. What can be said about the lines?
(A) The lines are parallel
(B) The lines are perpendicular
(C) The lines intersect at one point
(D) The lines are coincident
(E) The lines have the same slope but different y-intercepts

Open Ended Questions (FRQ)

- Q9.** Solve the system of equations by graphing: $y = 2x - 1$ and $y = x + 1$. Show your work and identify the intersection point.
- Q10.** Solve the system of equations by graphing: $x - y = 1$ and $x + y = 3$. Show your work and identify the intersection point.

Chef's Tips

- Emphasize the importance of accurately graphing the lines
- Make sure students understand that the intersection point represents the solution to the system
- Remind students to check their work by plugging the intersection point back into both equations
