

Foundation (Jalapeno)

- Q1.** What is the purpose of a stem-and-leaf plot?
(A) To display the mean of a dataset
(B) To display the distribution of a dataset
(C) To calculate the standard deviation
(D) To find the median of a dataset
(E) To graph a linear equation
- Q2.** Which of the following is a benefit of using a stem-and-leaf plot?
(A) It is only used for small datasets
(B) It can be used to display outliers
(C) It is difficult to construct
(D) It can only be used for integer data
(E) It is not useful for comparing distributions
- Q3.** What is the stem in a stem-and-leaf plot?
(A) The leaves of the plot
(B) The vertical line in the plot
(C) The first digit of each data point
(D) The last digit of each data point
(E) The title of the plot
- Q4.** Which of the following datasets would be most suitable for a stem-and-leaf plot?
(A) 1, 2, 3, 4, 5
(B) 10, 20, 30, 40, 50
(C) 1.1, 1.2, 1.3, 1.4, 1.5
(D) 100, 200, 300, 400, 500
(E) 0.1, 0.2, 0.3, 0.4, 0.5
- Q5.** How do you determine the stem of a data point in a stem-and-leaf plot?
(A) By looking at the last digit of the data point
(B) By looking at the first digit of the data point
(C) By looking at the mean of the dataset
(D) By looking at the median of the dataset
(E) By looking at the standard deviation of the dataset
- Q6.** What do the leaves represent in a stem-and-leaf plot?
(A) The first digit of each data point
(B) The last digit of each data point
(C) The mean of the dataset
(D) The median of the dataset
(E) The standard deviation of the dataset
- Q7.** Which of the following is NOT a characteristic of a stem-and-leaf plot?
(A) It is used to display the distribution of a dataset
(B) It is used to compare multiple distributions
(C) It is difficult to construct
(D) It can be used to identify outliers
(E) It can only be used for small datasets
- Q8.** What is the purpose of the vertical line in a stem-and-leaf plot?
(A) To separate the stem from the leaf
(B) To separate the mean from the median
(C) To separate the dataset from the title
(D) To separate the x-axis from the y-axis
(E) To separate the dataset from the standard deviation

Open Ended Questions (FRQ)

- Q9.** Construct a stem-and-leaf plot for the dataset: {12, 15, 18, 21, 24, 27, 30, 33, 36, 39}
- Q10.** Interpret the distribution of the dataset: {1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8, 1.9, 2.0} using a stem-and-leaf plot

Chef's Tips

- Tip 1: Encourage students to use pencil and paper to construct stem-and-leaf plots
- Tip 2: Remind students to label the stem and leaves clearly
- Tip 3: Suggest that students use a ruler to draw the vertical line in the stem-and-leaf plot
