

Advanced (Habanero)

- Q1.** What is the purpose of a stem-and-leaf plot?
(A) To display the mean of a dataset
(B) To show the median and mode
(C) To compare two datasets
(D) To visualize the distribution of a dataset
(E) To calculate the standard deviation
- Q2.** Which of the following is a benefit of using a stem-and-leaf plot?
(A) It can only be used with small datasets
(B) It is difficult to read and interpret
(C) It can help identify outliers
(D) It is only used for categorical data
(E) It is not useful for comparing datasets
- Q3.** What is the stem in a stem-and-leaf plot?
(A) The leaf values
(B) The stem values
(C) The median of the dataset
(D) The first digit of each value
(E) The last digit of each value
- Q4.** Which of the following datasets would be best represented by a stem-and-leaf plot?
(A) A dataset with 5 values
(B) A dataset with 50 values
(C) A dataset with 500 values
(D) A dataset with categorical values
(E) A dataset with only two values
- Q5.** How do you determine the stem values in a stem-and-leaf plot?
(A) By finding the mean of the dataset
(B) By finding the median of the dataset
(C) By grouping the values by their first digit
(D) By grouping the values by their last digit
(E) By using a random number generator
- Q6.** What is the leaf in a stem-and-leaf plot?
(A) The stem values
(B) The leaf values
(C) The median of the dataset
(D) The first digit of each value
(E) The remaining digits of each value
- Q7.** Which of the following is an example of a stem-and-leaf plot?
(A) A bar graph
(B) A histogram
(C) A scatter plot
(D) A table with stem values and leaf values
(E) A line graph
- Q8.** What can be inferred from a stem-and-leaf plot about the distribution of a dataset?
(A) The mean and standard deviation
(B) The median and mode
(C) The shape of the distribution
(D) The number of outliers
(E) The type of data

Open Ended Questions (FRQ)

- Q9.** Construct a stem-and-leaf plot for the following dataset: {12, 15, 18, 20, 22, 25, 30, 32, 35, 40}. Describe the shape of the distribution.
- Q10.** Compare and contrast the following two datasets using stem-and-leaf plots: {10, 12, 15, 18, 20} and {20, 22, 25, 30, 32}. What can be inferred about the distributions of the two datasets?

Chef's Tips

- Tip 1: Emphasize the importance of accurate stem-and-leaf plot construction
- Tip 2: Encourage students to use real-world examples to illustrate the benefits of stem-and-leaf plots
- Tip 3: Remind students to consider the shape of the distribution when interpreting stem-and-leaf plots
