Open Ended Questions (FRQ)

Q9. Create a two-way table to display the data from a survey of 50 students, where 20 students like math and 30 students like science. If 10 students like both, calculate the relative frequency of students who like only math.

Q10. A two-way table shows the relationship between the number of hours studied and the grade achieved by 100 students. If 40 students studied for 2 hours and achieved an A grade, 30 students studied for 4 hours and achieved a B grade, and 10 students studied for 2 hours and achieved a B grade, analyze the association between the variables and calculate the relative frequency of students who studied for 2 hours and achieved an A grade.

Chef's Tips

1

- Tip 1: Ensure students understand the concept of two-way tables before attempting the test.
- Tip 2: Encourage students to use diagrams and charts to help with calculations.
- Tip 3: Remind students to check their work and calculations carefully.
