

Foundation (Jalapeno)

- Q1.** The number of planets in our solar system is 8. What type of number is 8?
(A) Natural and odd
(B) Natural and even
(C) Integer and odd
(D) Whole and odd
(E) None of the above
- Q2.** The temperature in a lab experiment is -5 degrees Celsius. What type of number is -5 ?
(A) Natural
(B) Whole
(C) Integer
(D) Even
(E) Odd
- Q3.** The pattern of the number of astronauts on a space mission is 2, 4, 6, 8, What comes next in the pattern?
(A) 9
(B) 10
(C) 12
(D) 14
(E) 16
- Q4.** The number of electrons in an atom is 12. What type of number is 12?
(A) Natural and odd
(B) Natural and even
(C) Integer and odd
(D) Whole and odd
(E) None of the above
- Q5.** The result of $3 + (-2)$ is a . What is the value of a ?
(A) 1
(B) 3
(C) 5
(D) -1
(E) -3
- Q6.** The number of miles to the nearest star is 26. What type of number is 26?
(A) Natural and odd
(B) Natural and even
(C) Integer and odd
(D) Whole and odd
(E) None of the above
- Q7.** The pattern of the number of satellites in orbit is 1, 3, 5, 7, What comes next in the pattern?
(A) 8
(B) 9
(C) 11
(D) 13
(E) 15
- Q8.** The number of protons in an atom is 17. What type of number is 17?
(A) Natural and even
(B) Natural and odd
(C) Integer and even
(D) Whole and odd
(E) None of the above

Open Ended Questions (FRQ)

- Q9.** A spaceship is traveling at a speed of 25 miles per hour. If the spaceship travels for 3 hours, how many miles will it have traveled? Use $d = r \cdot t$ to solve the problem.
- Q10.** A lab experiment involves the reaction of -4 grams of a chemical. If 2 grams of the chemical are added, what is the new amount of the chemical in the experiment? Use integers to represent the situation and solve the problem.

Chef's Tips

- Tip 1: Emphasize the difference between natural, whole, and integer numbers.
- Tip 2: Use visual aids to help students understand the concept of negative numbers.
- Tip 3: Provide real-world examples of patterns and integers in science and space exploration.
