

Unit: Unit 0: Foundations of Algebra
Topic: Natural Numbers Integers

Name: _____

Date: _____

Homework (Habanero)

Open Ended Questions (FRQ)

Q9. A patient is taking a medication that has a 20

Q10. A population of bacteria grows according to the equation $P(t) = 200 \cdot 2^{0.5t}$, where t is time in hours. Find the population after 4 hours and explain the significance of the growth rate.

Chef's Tips

- Emphasize the importance of precise calculations and units.
- Encourage students to visualize and interpret the results in the context of healthcare and biology.
- Remind students to show their work and explain their reasoning for free-response questions.
