

Unit: undefined

Topic: Variables and Expressions / Order of Operations

Name: _____

Date: _____

Challenge (Level 0)

Q1. What is the variable in the expression $2x$?

- (A) 2
- (B) x
- (C) +
- (D) -
- (E) *

(A) +

(B) -

(C) *

(D) /

(E)

Q2. Identify the coefficient in the term $4y$.

- (A) y
- (B) 4
- (C) +
- (D) -
- (E) *

Q6. What is the term in the expression $2x + 5$ that contains the variable?

(A) $2x$

(B) 5

(C) +

(D) -

(E) *

Q3. What is the constant term in the expression $3x + 2$?

- (A) $3x$
- (B) 2
- (C) +
- (D) -
- (E) *

Q7. Which of the following expressions contains a constant term only?

(A) $3x$

(B) 2

(C) $x + 2$

(D) $3x + 2$

(E) $x - 2$

Q4. Which operation is performed first in the expression $2 + 3 \times 4$?

- (A) Addition
- (B) Subtraction
- (C) Multiplication
- (D) Division
- (E) Exponentiation

Q8. Identify the operation that is not present in the expression $2 \times 3 + 4$.

(A) Addition

(B) Subtraction

(C) Multiplication

(D) Division

(E) Exponentiation

Q5. Identify the operator in the expression $5 - 2$.

Open Ended Questions (FRQ)

Q9. Draw and label the different parts of the expression $2x + 5$. Explain the role of each part.

Q10. Explain the concept of order of operations. Provide an example of how it is used to simplify an expression.

Chef's Tips

- Emphasize the importance of identifying and understanding the different parts of an expression, such as coefficients, variables, and constant terms.
- Use visual aids and examples to illustrate the concept of order of operations and how it is used to simplify expressions.
- Provide opportunities for students to practice applying the order of operations to simplify expressions and solve problems.
