

Advanced (Level 1)

Q1. What is the variable in the expression $2x + 3$?

- (A) 2
- (B) 3
- (C) x
- (D) $2x$
- (E) $2 + 3$

Q2. Identify the coefficient in the term $4y$

- (A) y
- (B) 4
- (C) $4y$
- (D) 0
- (E) 1

Q3. What is the constant term in the expression $2x - 5$?

- (A) $2x$
- (B) -5
- (C) 2
- (D) 5
- (E) $2 - 5$

Q4. Identify the operator in $7 - 2$

- (A) +
- (B) -
- (C) *imes*
- (D) *div*
- (E) =

Q5. What is the term $3z$ an example of?

- (A) Constant
- (B) Variable
- (C) Coefficient
- (D) Monomial
- (E) Binomial

Q6. In the expression $9x^2$, what is x^2 ?

- (A) Variable
- (B) Coefficient
- (C) Constant
- (D) Exponent
- (E) Monomial

Q7. Identify the exponent in $2x^3$

- (A) 2
- (B) x
- (C) 3
- (D) $2x$
- (E) x^3

Q8. In $4(2x + 1)$, what operation should be performed first?

- (A) Multiplication
- (B) Addition
- (C) Subtraction
- (D) Division
- (E) Exponentiation

Open Ended Questions (FRQ)

Q9. Draw a diagram to illustrate the concept of variables and constants in the expression $3x + 2$. Label each part.

Q10. Explain in your own words what the order of operations is and provide an example. Use $2 + 3imes4$ as your example.

Chef's Tips

- Keep the focus on basic definitions and single-step identification for Level 1.
- Ensure students understand that variables represent unknown or changing values, while constants are fixed values.
- Emphasize the importance of following the order of operations (PEMDAS/BODMAS) to simplify expressions correctly.
