

Homework (Jalapeno)

- Q1.** Is 24 divisible by 3?
(A) Yes
(B) No
(C) Maybe
(D) Depends on the context
(E) None of the above
- Q2.** What is the remainder when 17 is divided by 5?
(A) 0
(B) 1
(C) 2
(D) 3
(E) 4
- Q3.** The ancient Egyptians built a pyramid with 180 stone blocks in each row. How many rows can be made if each row must have a multiple of 10 blocks?
(A) 10 rows
(B) 15 rows
(C) 18 rows
(D) 20 rows
(E) 25 rows
- Q4.** The Babylonians used a sexagesimal (base-60) number system. Is the number 120 divisible by 4 in this system?
(A) Yes
(B) No
(C) Maybe
(D) Depends on the context
(E) None of the above
- Q5.** What is the result of $43 \div 5$ with remainder?
- (A) 8 with remainder 3
(B) 9 with remainder 1
(C) 8 with remainder 1
(D) 7 with remainder 2
(E) 6 with remainder 4
- Q6.** The ancient Greeks used 12 gods to represent the 12 months of the year. If 36 stones are to be divided equally among these 12 gods, how many stones will each god receive?
(A) 2 stones
(B) 3 stones
(C) 4 stones
(D) 5 stones
(E) 6 stones
- Q7.** A Mayan calendar has 365 days in a year. If the days are divided into weeks of 7 days, how many weeks are there in a year with remainder?
(A) 52 weeks with remainder 1 day
(B) 51 weeks with remainder 2 days
(C) 52 weeks with remainder 3 days
(D) 51 weeks with remainder 1 day
(E) 52 weeks with remainder 2 days
- Q8.** The ancient Chinese used the remainder theorem to solve problems. If 17 is divided by 5, what is the remainder?
(A) 0
(B) 1
(C) 2
(D) 3
(E) 4

Open Ended Questions (FRQ)

- Q9.** The ancient Sumerians used a system of mathematics that included long division. Perform long division to find the quotient and remainder of $63 \div 9$. Show your work and write your answer as $\boxed{\textit{quotient with remainder remainder}}$.
- Q10.** In ancient Egypt, a farmer has 48 baskets of wheat to distribute among 8 villages. If each village must receive an equal number of baskets, how many baskets will each village receive? Perform the division and write your answer as $\boxed{\textit{answer}}$.

Chef's Tips

1

- Tip 1: Emphasize the importance of understanding the concepts of divisibility and division algorithm.
- Tip 2: Ensure students can apply the rules of divisibility for 2, 3, 5, 9, and 10.
- Tip 3: Encourage students to use real-world examples and historical contexts to practice problem-solving skills.
