Date: _____

Quiz (Habanero)

Open Ended Questions (FRQ)

Q9. A city's population $\uparrow$ 15% in 5 years. If the current population is 50000, what is the expected population after 10 years, assuming the same growth rate?

Q10. A company's Carbon Footprint $\downarrow$ 20% after implementing Renewable Energy sources. If their original Carbon Footprint was 5000 tons per year, what is their new Carbon Footprint?

Chef's Tips

- Emphasize the importance of percentage calculations in real-world problems
- Use visual aids to help students understand concept of percentage increase/decrease
- Encourage students to use real-world examples from weather and environment to practice percentage calculations
