

Foundation (Jalapeno)

Open Ended Questions (FRQ)

Q9. A company's profits are modeled by the equation $P = 2^x$, where x is the number of years. If the initial profit was

$$2^2$$

, what is the profit after 3 years?

Q10. Simplify the expression

$\frac{(2^2)^3}{2^4}$ and explain the steps used to simplify it

Chef's Tips

1

- Tip 1: Ensure students understand the product rule for exponents
- Tip 2: Remind students to simplify expressions using exponent rules
- Tip 3: Encourage students to apply exponent rules in real-world contexts like business and finance
