

Foundation (Jalapeno)

Open Ended Questions (FRQ)

Q9. Given $f(x) = x^2 - 1$ and $g(x) = x + 2$, find $(f \circ g)(x)$ and determine its domain.

Q10. A rocket's altitude is given by $f(t) = 100t - t^2$ meters, where t is time in seconds. If the velocity is given by $g(h) = 2h$ meters per second, where h is altitude in meters, find $(g \circ f)(t)$ and interpret the result in the context of the problem.

Chef's Tips

- Check calculations carefully
- Consider the order of operations
- Use correct notation and units
