

Homework (Jalapeno)

Open Ended Questions (FRQ)

Q9. The ancient Greeks used the function $f(x) = 2x + 1$ to calculate the perimeter of a rectangle. If $g(x) = x^2 - 4$, what is the perimeter of a rectangle with a length of $x = 3$? Show your work and explain your answer.

Q10. The ancient Egyptians used composite functions to calculate the area of circular structures. If $f(x) = \pi x^2$ and $g(x) = 2x + 1$, what is the area of a circular structure with a radius of $x = 4$? Show your work and explain your answer.

Chef's Tips

1

- Tip 1: Make sure students understand the concept of composite functions before administering the test.
- Tip 2: Emphasize the importance of domain restrictions in composite functions.
- Tip 3: Encourage students to use real-world examples to illustrate their understanding of composite functions.
