Open Ended Questions (FRQ)

- Q9.** A researcher measured the depth of a lake at two different points. At point A, the depth was 10 meters below the surface, and at point B, the depth was 8 meters below the surface. What is the absolute value of the difference in depth between the two points? Show your work and explain your answer.
- Q10.** A city's average temperature in January was -2 degrees Celsius, and in July it was 25 degrees Celsius. What is the absolute value of the temperature change between the two months? Explain how you would calculate this value using absolute value.

Chef's Tips

- Read each question carefully before answering
- Use a number line to help visualize the concept of absolute value
- Check your work and explain your reasoning
