

Challenge (Habanero)

Open Ended Questions (FRQ)

Q9. Graph the inequality $y < 2x - 1$. Clearly label the x and y axes. Identify and label the boundary line.

Q10. The park ranger has set up two animal feeders, A and B , with their respective areas of influence given by $x + y \leq 8$ and $y \geq x - 3$. Determine the overlapping region where both conditions are met and describe the boundaries of the overlapping region.

Chef's Tips

- Emphasize the importance of labeling axes when graphing inequalities
- Ensure students understand how to identify the boundary lines and their types (solid or dashed)
- Remind students that the boundary line equation should be written in slope-intercept form ($y = mx + b$) where possible
