

## Quiz (Carolina Reaper)

---

### Open Ended Questions (FRQ)

**Q9.** Given the system  $y = 2x - 3$  and  $y = -x + 6$ , find the coordinates of the intersection point. Show all work and explain the graphical significance.

**Q10.** For a logistics problem, the system  $3x + 2y = 12$  and  $x - 2y = -4$  is used. Graph both equations and find the point of intersection. Interpret the meaning of the intersection point in the context of logistics.

### Chef's Tips

- Tip 1: Check for consistency in the units of measurement.
- Tip 2: Ensure students show all work for free response questions.
- Tip 3: Use the graphical solutions to interpret real-world applications.
