

Challenge (Habanero)**Open Ended Questions (FRQ)**

Q9. Solve the system $x + 2y = 7$ and $3x - 2y = 1$ by graphing. Find the intersection point and interpret the solution in the context of a recipe.

Q10. The system $2x + y = 9$ and $x - 2y = -4$ represents the cost of materials and labor for a construction project. Graph the system and find the point of intersection. Interpret the solution in the context of the project.

Chef's Tips

- Emphasize the importance of accurate graphing
- Encourage students to check their solutions
- Remind students to interpret their answers in context
