

Advanced (Carolina Reaper)

Open Ended Questions (FRQ)

Q9. Factor the expression: $x^2 + 9x + 4x + 36$

Q10. Verify the factoring of the expression: $(x + 2)(x + 5)$ by multiplying the factors. Show your work and write the final result in factored form.

Chef's Tips

1

- Chef's Tips: Make sure to use the distributive property when factoring by grouping.
- Remind students to verify their answers by multiplying the factors.
- Encourage students to use real-world examples to make factoring more meaningful.
