

Foundation (Jalapeno)

- Q1.** What is the purpose of a stem-and-leaf plot in sports statistics?
(A) To compare team scores
(B) To display individual player scores
(C) To show the distribution of scores
(D) To rank players by distance run
(E) To calculate team averages
- Q2.** Which of the following is a benefit of using a stem-and-leaf plot to analyze marathon finishing times?
(A) Easy to compare with other sports
(B) Difficult to interpret for large datasets
(C) Allows for quick identification of outliers
(D) Only useful for team sports
(E) Requires advanced mathematical knowledge
- Q3.** A basketball player scored the following points in 5 games: 12, 15, 20, 18, 22. Which stem-and-leaf plot represents these scores?
(A) 1 | 2 5 8, 2 | 0 2
(B) 1 | 2 5 8 0, 2 | 2
(C) 1 | 2 5 8, 2 | 0
(D) 1 | 2 5, 2 | 0 2
(E) 1 | 2 5 8 0 2
- Q4.** The stem-and-leaf plot below represents the 100m dash times (in seconds) for a group of sprinters: 9|589, 10|125. Which of the following statements is true about the data?
(A) All times are above 10 seconds
(B) Most times are below 10 seconds
(C) The fastest time is 9.5 seconds
(D) The slowest time is 10.5 seconds
(E) There is an outlier at 10.2 seconds
- Q5.** A golfer's scores for 7 rounds are: 75, 72, 80, 78, 85, 76, 82. What is the stem of the score 82 in a stem-and-leaf plot?
(A) 7
(B) 8
(C) 75
(D) 80
(E) 85
- Q6.** Which type of data is best represented by a stem-and-leaf plot?
(A) Categorical data
(B) Ordinal data
(C) Numerical data
(D) Geographical data
(E) Time-series data
- Q7.** What does the leaf represent in a stem-and-leaf plot of tennis serve speeds (in *mph*)?
(A) The ones digit of the speed
(B) The tens digit of the speed
(C) The hundreds digit of the speed
(D) The unit of measurement
(E) The player's name
- Q8.** The stem-and-leaf plot below displays the times (in minutes) it took for a group of cyclists to complete a race: 2|58, 3|149. How many cyclists completed the race in under 3 minutes?
(A) 1
(B) 2
(C) 3
(D) 4
(E) 5

Open Ended Questions (FRQ)

- Q9.** Create a stem-and-leaf plot for the following basketball scores: 18, 22, 20, 25, 30, 28, 19. Use the stem as the tens digit and the leaf as the ones digit.
- Q10.** The times (in seconds) for a 400m dash are given below. Create a stem-and-leaf plot and interpret the distribution of the times: 48, 52, 50, 55, 58, 49, 53. Use the stem as the tens digit and the leaf as the ones digit.

Chef's Tips

- Provide a variety of real-world examples to illustrate the importance of stem-and-leaf plots in sports statistics.
- Encourage students to use technology, such as graphing calculators or software, to create and analyze stem-and-leaf plots.
- Emphasize the importance of accurate and precise calculations when creating and interpreting stem-and-leaf plots.
