

Advanced (Carolina Reaper)

- Q1.** What is the purpose of a stem-and-leaf plot in daily life?
(A) To compare prices of groceries
(B) To visualize distribution of data
(C) To calculate statistical means
(D) To organize schedules
(E) To graph functions
- Q2.** Which of the following is a benefit of using stem-and-leaf plots for time management?
(A) Easy to compare schedules
(B) Difficult to identify patterns
(C) Limited to small datasets
(D) Visual representation of time allocations
(E) Requires extensive calculations
- Q3.** Given the stem-and-leaf plot below, what is the range of the data?
- 28
endarray, what is the range of the data?
- Q4.** 12
Q5. 7
Q6. 9
Q7. 11
- Q8.** What does the stem represent in a stem-and-leaf plot?
(A) The ones digit
(B) The tens digit
(C) The ones and tens digits combined
(D) The first digit of a number
(E) The last digit of a number
- Q9.** Suppose you have 5 hours of free time per day. How can a stem-and-leaf plot help you manage this time for hobbies?
(A) By showing the most time-consuming hobby
(B) By allowing comparison of time allocations
(C) By calculating the total time spent on hobbies
(D) By identifying the hobby with the least time spent
(E) By visualizing time distribution across hobbies
- Q10.** If a dataset has a large range, what does the stem-and-leaf plot look like?
(A) Many stems with few leaves
(B) Few stems with many leaves
(C) A mix of both, evenly distributed
(D) A long list with mostly single entries
(E) Very short, with nearly all data in one stem
- Q11.** A dataset shows monthly expenses. To analyze spending habits, which use of a stem-and-leaf plot is most appropriate?
(A) To find the average expense
(B) To compare monthly expenses
(C) To show how expenses are distributed across categories
(D) To calculate total yearly expenses
(E) To find the most expensive category
- Q12.** Given the stem-and-leaf plot below, how many numbers are greater than 24?
24
endarray, how many numbers are greater than 24?
- Q13.** 1
Q14. 2
Q15. 3
Q16. 4
Q17. 5

Open Ended Questions (FRQ)

- Q9.** Suppose the times (in minutes) taken to complete a puzzle are 21, 25, 31, 35, 42, 45, 52. Construct a stem-and-leaf plot for the data and describe the distribution.
- Q10.** A bookstore has the following prices (in dollars) for a set of books: 10.50, 12.25, 15.99, 18.75, 20.10, 22.50, 25.00. Create a stem-and-leaf plot for the prices and find the range of the data. Show all your steps and explain your reasoning.

Chef's Tips

- Ensure students understand the concept of distribution in the context of stem-and-leaf plots.
- Emphasize the importance of stem-and-leaf plots for visualizing and interpreting data in daily life scenarios.
- Remind students to check their work by verifying calculations and plots.
