

Quiz (Carolina Reaper)

- Q1.** A shipping company tracks the delivery times of its trucks. The two-way table shows the number of trucks that arrive on time or late, based on the traffic conditions. What is the relative frequency of trucks that arrive on time in heavy traffic?
- (A) $\frac{1}{6}$
(B) $\frac{1}{3}$
(C) $\frac{1}{2}$
(D) $\frac{2}{3}$
(E) $\frac{5}{6}$
- Q2.** A logistics company uses a two-way table to analyze the relationship between the type of cargo and the mode of transportation. If 25
- (A) 10
(B) 12
(C) 15
(D) 18
(E) 20
- Q3.** The table shows the number of flights that depart on time or late, based on the airport. What is the association between the airport and the departure time?
- (A) Positive association
(B) Negative association
(C) No association
(D) Inverse association
(E) Causal association
- Q4.** A transportation company uses a two-way table to analyze the relationship between the driver's experience and the number of accidents. If 30
- (A) 5
(B) 6
(C) 7
(D) 8
(E) 9
- Q5.** The two-way table shows the number of trucks that arrive at a warehouse, based on the day of the week and the time of day. What is the relative frequency of trucks that arrive on Mondays before 10am?
- (A) $\frac{1}{10}$
(B) $\frac{1}{5}$
(C) $\frac{1}{4}$
(D) $\frac{1}{3}$
(E) $\frac{1}{2}$
- Q6.** A delivery company uses a two-way table to analyze the relationship between the package weight and the shipping method. If 40
- (A) 10
(B) 12
(C) 15
(D) 18
(E) 20
- Q7.** The two-way table shows the number of flights that depart from a city, based on the airline and the destination. What is the association between the airline and the destination?
- (A) Positive association
(B) Negative association
(C) No association
(D) Inverse association
(E) Causal association
- Q8.** A logistics company uses a two-way table to analyze the relationship between the type of cargo and the delivery time. If 25
- (A) 8
(B) 10
(C) 12
(D) 15
(E) 18

Open Ended Questions (FRQ)

- Q9.** A shipping company tracks the delivery times of its trucks. The two-way table shows the number of trucks that arrive on time or late, based on the traffic conditions. Calculate the relative frequency of trucks that arrive on time in light traffic, and explain the association between the traffic conditions and the delivery times.
- Q10.** A transportation company uses a two-way table to analyze the relationship between the driver's experience and the number of accidents. If the table shows that 50
