

Quiz (Carolina Reaper)

Open Ended Questions (FRQ)

Q9. Graph the function $y = -2f(x - 1) + 3$ if $f(x) = x^2$ and describe the transformations applied to the graph of $f(x)$.

Q10. Compare the graphs of $y = f(x)$, $y = f(x + 2)$, and $y = f(x) - 2$ if $f(x) = x^2 + 1$. Describe the transformations that occur.

Chef's Tips

1

- Tip 1: Ensure students understand the concept of parent functions.
- Tip 2: Emphasize the importance of identifying the type of transformation.
- Tip 3: Remind students to check their work by graphing the original and transformed functions.
