

Quiz (Carolina Reaper)

Open Ended Questions (FRQ)

Q9. Given $f(x) = x^3 - 2x^2 + x - 1$ and $g(x) = 2x - 1$, find $(f + g)(x)$ and determine its domain.

Q10. If $f(x) = \frac{1}{x-2}$ and $g(x) = \frac{1}{x+2}$, find $(f - g)(x)$ and simplify the resulting expression.

Chef's Tips

1

- Remind students to check the domain of the resulting functions.
- Encourage students to simplify expressions after performing operations.
- Emphasize the importance of accurate calculations.
