

Foundation (Jalapeno)

- Q1.** Which lines are parallel if they have the same m ?
- (A) Perpendicular lines
 - (B) Parallel lines
 - (C) Skew lines
 - (D) Intersecting lines
 - (E) Coincident lines
- Q2.** What is the slope of a line parallel to $y = 2x + 1$?
- (A) $m = 1$
 - (B) $m = 2$
 - (C) $m = 3$
 - (D) $m = 4$
 - (E) $m = 5$
- Q3.** If $y = 3x - 2$ and $y = 3x + 1$ are parallel, what is the relationship between their y -intercepts?
- (A) Equal
 - (B) Not equal
 - (C) One is double the other
 - (D) One is triple the other
 - (E) One is quadruple the other
- Q4.** What is the equation of a line parallel to $x - 2y = 3$?
- (A) $x - 2y = 4$
 - (B) $x - 2y = 5$
 - (C) $x - 2y = 6$
 - (D) $2x - y = 3$
 - (E) $2x + y = 3$
- Q5.** If two lines have the same slope and the same y -intercept,
- what can be said about the lines?
- (A) They are parallel
 - (B) They are perpendicular
 - (C) They are skew
 - (D) They are coincident
 - (E) They are intersecting
- Q6.** Which of the following is NOT a characteristic of parallel lines?
- (A) Same slope
 - (B) Same y -intercept
 - (C) Never intersect
 - (D) Always have the same equation
 - (E) Always have different equations
- Q7.** If $y = mx + b$ is a line, what is the equation of a line parallel to it?
- (A) $y = mx + b + 1$
 - (B) $y = mx + b - 1$
 - (C) $y = mx + c$
 - (D) $y = -mx + b$
 - (E) $y = -mx - b$
- Q8.** What can be said about the slopes of two parallel lines?
- (A) They are equal
 - (B) They are not equal
 - (C) One is double the other
 - (D) One is triple the other
 - (E) One is quadruple the other
- Q5.** If two lines have the same slope and the same y -intercept,

Open Ended Questions (FRQ)

- Q9.** Write an equation of a line parallel to $y = 2x - 3$. Show your work and explain why your line is parallel.
- Q10.** Prove that the lines $y = x + 2$ and $y = x - 1$ are parallel. Show all work and explain your reasoning.

Chef's Tips

- Tip 1: Encourage students to show all work and explain their reasoning.
- Tip 2: Remind students to use the slope-intercept form of a line ($y = mx + b$).
- Tip 3: Consider providing a graphing calculator for students to visualize the lines.
