

### Foundation (Jalapeno)

- Q1.** What is the purpose of a stem-and-leaf plot?
- (A) To display the mean of a dataset
  - (B) To show the distribution of a dataset
  - (C) To calculate the median of a dataset
  - (D) To find the mode of a dataset
  - (E) To graph a linear equation
- Q2.** Which of the following is a benefit of using a stem-and-leaf plot?
- (A) It can only be used with small datasets
  - (B) It is difficult to read and interpret
  - (C) It can help identify outliers in a dataset
  - (D) It is only used for categorical data
  - (E) It is not useful for comparing multiple datasets
- Q3.** What is the stem in a stem-and-leaf plot?
- (A) The leaf value
  - (B) The stem value
  - (C) The first digit of a number
  - (D) The last digit of a number
  - (E) The middle digit of a number
- Q4.** What is the leaf in a stem-and-leaf plot?
- (A) The first digit of a number
  - (B) The last digit of a number
  - (C) The stem value
  - (D) The middle digit of a number
  - (E) The decimal part of a number
- Q5.** Which of the following datasets would be best represented by a stem-and-leaf plot?
- (A) A set of exam scores with a small range of values
  - (B) A set of temperatures with a large range of values
  - (C) A set of categorical data
  - (D) A set of numerical data with many outliers
  - (E) A set of data with a large number of missing values
- Q6.** How do you determine the stem for a given number in a stem-and-leaf plot?
- (A) By looking at the first digit of the number
  - (B) By looking at the last digit of the number
  - (C) By looking at the middle digit of the number
  - (D) By rounding the number to the nearest integer
  - (E) By truncating the number to the nearest integer
- Q7.** What can be inferred from a stem-and-leaf plot about the distribution of a dataset?
- (A) The mean of the dataset
  - (B) The median of the dataset
  - (C) The mode of the dataset
  - (D) The shape of the distribution
  - (E) The number of outliers in the dataset
- Q8.** Which of the following is NOT a common use of a stem-and-leaf plot?
- (A) To compare the distribution of two or more datasets
  - (B) To identify outliers in a dataset
  - (C) To calculate the mean of a dataset
  - (D) To display the distribution of a dataset
  - (E) To graph a linear equation
- Q5.** Which of the following datasets would be best represented

#### Open Ended Questions (FRQ)

- Q9.** Construct a stem-and-leaf plot for the following dataset: {12, 15, 18, 20, 22, 25, 30, 35, 40, 45}
- Q10.** Interpret the distribution of the following stem-and-leaf plot: Stem: {1, 2, 3, 4} Leaves: {2, 5, 8, 1, 4, 7, 0, 3, 6, 9}

#### Chef's Tips

1

- Tip 1: Encourage students to use the stem-and-leaf plot to identify the shape of the distribution
- Tip 2: Remind students to look for outliers in the dataset
- Tip 3: Suggest that students use the stem-and-leaf plot to compare the distribution of two or more datasets
