

Foundation (Jalapeno)

- Q1.** What is the purpose of a stem-and-leaf plot?
(A) To display the mean of a dataset
(B) To visualize the distribution of a dataset
(C) To calculate the median of a dataset
(D) To find the mode of a dataset
(E) To determine the range of a dataset
- Q2.** Which of the following is a benefit of using a stem-and-leaf plot?
(A) It can only be used with small datasets
(B) It is difficult to read and interpret
(C) It can help identify outliers in a dataset
(D) It is only used for categorical data
(E) It is not useful for comparing multiple datasets
- Q3.** What is the stem in a stem-and-leaf plot?
(A) The leaves of the plot
(B) The stem of the plot
(C) The first digit of each data point
(D) The last digit of each data point
(E) The axis labels
- Q4.** What is the leaf in a stem-and-leaf plot?
(A) The first digit of each data point
(B) The last digit of each data point
(C) The axis labels
(D) The title of the plot
(E) The stem of the plot
- Q5.** Which of the following datasets would be best represented using a stem-and-leaf plot?
(A) A dataset with 5 data points
(B) A dataset with 10 data points
(C) A dataset with 50 data points
(D) A dataset with 100 data points
(E) A dataset with 500 data points
- Q6.** How do you determine the stem for a stem-and-leaf plot?
(A) By finding the mean of the dataset
(B) By finding the median of the dataset
(C) By looking at the first digit of each data point
(D) By looking at the last digit of each data point
(E) By counting the number of data points
- Q7.** What does the shape of a stem-and-leaf plot tell you about the distribution of the data?
(A) The shape tells you nothing about the distribution
(B) A symmetrical shape indicates a normal distribution
(C) A skewed shape indicates a uniform distribution
(D) A bell-shaped curve indicates a bimodal distribution
(E) A flat shape indicates a multimodal distribution
- Q8.** How do you interpret the leaves in a stem-and-leaf plot?
(A) The leaves represent the mean of the dataset
(B) The leaves represent the median of the dataset
(C) The leaves represent the individual data points
(D) The leaves represent the range of the dataset
(E) The leaves represent the mode of the dataset

Open Ended Questions (FRQ)

Q9. Construct a stem-and-leaf plot for the following dataset: 23, 11, 14, 17, 26, 18, 25, 22, 19, 24

Q10. Interpret the distribution of the following stem-and-leaf plot: Stem: 2 Leaves: 1, 3, 5, 7, 9 Stem: 3 Leaves: 0, 2, 4, 6, 8

Chef's Tips

1

- Tip 1: Encourage students to use pencil and paper to construct and interpret stem-and-leaf plots
- Tip 2: Remind students to label the stem and leaves clearly in their plots
- Tip 3: Suggest that students use real-world datasets to practice constructing and interpreting stem-and-leaf plots
